LAION-5B: A NEW ERA OF OPEN LARGE-SCALE MULTI-MODAL DATASETS

by: Romain Beaumont, 31 Mar, 2022

We present a dataset of 5,85 billion CLIP-filtered image-text pairs, 14x bigger than LAION-400M, previously the biggest openly accessible image-text dataset in the world - see also our [NeurIPS2022 paper](#)

[See our update](#) on the LAION-5B dataset.

Large image-text models like ALIGN, BASIC, Turing Bletchly, FLORENCE & GLIDE have shown better and better performance compared to previous flagship models like CLIP and DALL-E. Most of them had been trained on billions of image-text pairs and unfortunately, no datasets of this size had been openly available until now. To address this problem we present LAION 5B, a large-scale dataset for research purposes consisting of 5,85B CLIP-filtered image-text pairs. 2,3B contain English language, 2,2B samples from 100+ other languages and 1B samples have texts that do not allow a certain language assignment (e.g. names). Additionally, we provide several nearest neighbor indices, an improved web interface for exploration & subset creation as well as detection scores for watermark and NSFW. We also announce a full reproduction of a clip training trained on LAION-400M at [open_clip](#). Explore the dataset at the [search demo](#). See also the [same post on laion website](#).

We thank our sponsors [hugging face](#), [doodlebot](#) and [stability](#) for providing us with computing resources to produce this dataset! We also thank the-eye.eu for hosting the image embeddings and a copy of the whole dataset.

Prompt ambigui: richieste generiche che permettono alla IA di riempire i vuoti

Prompt: genera una PERSONA ITALIANA ADOLESCENTE

- Come è vestita questa persona?
- Di che genere è?
- È all'aperto o al chiuso?
- In quale momento della giornata?
- Cosa me lo caratterizza come persona italiana?

Prompt: genera una PERSONA FRANCESE ADOLESCENTE

Prompt: genera una PERSONA ITALIANA ADOLESCENTE

Gli stereotipi sono per noi riconoscibili

Cosa viene **amplificato** dalla AI?
